[Measuring Usb Microscope Software Mac](#)

The screenshot displays the software interface for measuring a curved object. The main window shows a green, curved biological specimen with a red arc drawn over it. A horizontal red line connects the ends of the arc, and a vertical red line drops from the top of the arc to this horizontal line, forming a right-angled triangle. Three numbered callouts indicate the measurement process: 1. Click here (at the left end of the arc), 2. Move to this point and click again (at the right end of the arc), and 3. Move to this point and click again to finish the measurement of radius (at the top of the arc). The software displays the following measurements: Radius = 198 and Curvature = 78 degrees. A scale bar in the bottom right corner indicates 20 µm. The interface includes a menu bar (File, Microscope and Camera, Preferences, Measurement, Tools, Exposure Correction, Help), a toolbar with icons for Show Preview Window, Use DSLR Camera, Open and Save Image, Grabbed Images, Calibration / Measurement, and Action: Closteriometry. The current measurement is 0.30830 um / pixel. The software is running on an Optech + 600D microscope with a 40X objective. The sample information is: Balloo Kampsheide Ven bij spoorbaan, km 237.388 - 557.074, SampleDate = 2013-09-13, Optech + 600D; Obj: 40 X; um/pixel: 0.308300. The file name is Closterium costatum var. costatum_2013-09-13_0001_40X.jpg.
