ENCRYPTION AND AUTHENTICATIONTeamViewer traffic is secured using RSA public/private key exchange and AES (256-bit) session encryption.. In this manner, the publisher of the software is always readily identifiable If the software has been changed afterwards, the digital signature automatically becomes invalid.. This technology is used in a comparable form for https/SSL and is considered completely safe by today's standards.. All Management Console data transfer is through a secure channel using TLS (Transport Layer Security) encryption, the standard for secure Internet network connections.. The most popular Mac alternative is AnyDesk, which is free If that doesn't suit you, our users have ranked more than 100 alternatives to TeamViewer and loads of them are available.. Code SigningAs an additional security feature, all of our software is signed via DigiCert Code Signing.. Not even TeamViewer, as the operators of the routing servers, can read the encrypted data traffic..
